

# AWS Data Foundations

## Turnkey data platform

Building your modern data platform from the ground up can be a difficult and time-consuming process, not to mention resource-intensive. Servian believes that enterprise-grade data operations and self-service are key differentiators for any business, and it can be achieved at a fraction of the time and cost of building one yourself.

Servian's AWS Data Foundations is a turnkey solution enabling companies to realise the value of cloud through an automated end-to-end data platform purpose-built for AWS.

### What is it

AWS Data Foundations provides a proven best practice approach to data ingestion, transformation, and consumption on AWS.

Utilising native AWS products and services with a high emphasis on serverless capabilities introduces customers to a highly scalable and cost-effective cloud-native data platform.

### What are the benefits

For IT teams, the platform operationalises data management and eliminates data silos for central management of all enterprise data sources, regardless of location.

For business users, the platform delivers a self-service, enterprise-wide data catalogue through which to discover and wrangle data sets, and derive transformational business insights using advanced analytics.

### What we deliver

You will receive an extensible unified data platform consisting of an Amazon S3 data lake, Amazon Redshift data warehouse, Amazon Glue data pipelines, and an Amazon DynamoDB metadata and audit frameworks. All delivered via a deployable Infrastructure as Code

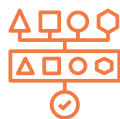

## Data Foundation Features

Data Lake

Data Warehouse

Data Pipelines

Metadata Framework

Audit Framework

Automated Deployment

## Why Servian

We drive a competitive advantage for our customers by enabling them to become truly data-driven. We help organisations design and implement robust enterprise data management strategies and data platforms that ensure the security, accuracy, and reliability of their data. Our services in data and analytics span across advisory, consulting and managed services.
