

# Space Compass

The space compass is designed to build a strategy for your business to take advantage of orbital and off-planet technology, research and development.

With 7.6 billion people on Earth, it's becoming increasingly important to navigate the possibilities your business has in leveraging space technology to work with your customers on the planet and eventually off-planet. Are you ready for 2050?

## Boldly go where no business has gone before

### Key Benefits

Overcoming the challenges of working in space has led areas including health and medicine, transportation, public safety, consumer goods, energy and environment, information technology, and industrial productivity. This program provides you with a comprehensive strategy of how the space program can provide financial and cultural benefits to your business.

### Key Activities

#### Explore Space Technology

- Complete a series of sessions exploring technologies and use cases for IoT, Satellite Imagery, Security (Defence Force and other), Research and Development.
- Explore your space partners such as Fleet Space, GOMSpace, Australian Space Agency and how Servian works collectively to drive results for Clients.

### Workshops and breakout sessions

- Sessions developed to find a real use case for space technology and your business and honing in on tangible business outcomes.
- Technical deep dives to understand the technologies and partnerships required to launch your prototype.
- Group discussions to provide immediate recommendations and feedback for your team on the overall plan.

### Presentations for all levels of the business

- A concise roadmap, space technology tree, timeline and detailed report for your space journey.
- High-level presentation of recommended next steps and best value innovation for today and the next 30 years.
- Interactive Q&A session

## Why Let Us Help?

### Have a clear picture of what Space can mean for you.

- Clear roadmap that focuses on business values.
- Structured workshops for all levels of the business, with everyone on one journey.
- Case studies demonstrating how the changes add value to the business.

### Deliverables

Technical deep dives to understand the technologies

Setup of environment with secure cloud foundations, billing and security capabilities

A concise roadmap, space technology tree, timeline and detailed report for your space journey.

Interactive Q&A sessions

Case studies

Structured workshops for all levels of the business

## Business case for Space

Businesses may not even know that Space is in their reach or how it can be effectively used to grow their business, both economically as well as culturally. The Space Compass provides you with the clear value proposition to your business along with providing an energy and buzz that your company and teams may not have felt before.

### Extend your company vision beyond Earth.

Have you considered what shooting for the stars could do for your company? What can your business do to define themselves for the next 1000+ years, rather than just the next 100?

### Drive your business technology reach through Space

Mankind didn't think of Bluetooth until... space. We didn't consider the need for endless energy and propulsion systems till we thought of space. Our clients have found that the space compass program has helped them look at Data and Analytics, Spatial systems, Mathematics done in anger and overall Serverless/Edge Computing capabilities that have practical applications today as a side effect of what they're building for tomorrow.

## Why Servian

Servian drives competitive advantage for its customers by enabling them to become truly data-driven. It helps organisations design and implement robust enterprise data management strategies and data platforms that ensure the security, accuracy and reliability of their data. Its services in data and analytics span across advisory, consulting and managed services.

## Enquire Today

Go to [www.servian.com](http://www.servian.com) and submit the 'Enquiry' form and a Servian representative will get in touch with you.
